FOR RIDERS

SINCE 1971

HJC has been developing and manufacturing helmets since 1971. Highly praised in the field of motorcycle helmets, HJC is recognized for its long history of helmet production involving advanced material construction, strength and lightweight performance.

50 YEARS OF CONTINUOUS CHALLENGES

Now, HJC is celebrating its 50th anniversary. In commitment to excellence and advancement in helmet technology, HJC has mastered the art of making helmets to premium standards. The brand has distribution in over 80 different countries worldwide with various helmet categories representing 20% of the European motorcycle helmet market.

Being the #1 helmet manufacturer in the world for over 17 years, HJC has a legacy to nurture. HJC invests heavily in design and development in a variety of categories, working hand in hand with global partners and advanced technologies.

With lessons learned from the time it took to be successful, HJC is now moving forward once again with the aim of becoming the world's firstclass helmet company by developing next level cycle and snow helmets with strategic choices made in the creation and the introduction of new construction methods.

HJC

FOR THE MOMENT

LET US RIDE

HJC SPORTS is about the moment, finding one's self again, in a leap of escape from artificial boundaries and into self-restoration, self-acceptance, balance and peace and in a flow of harmony with all that surrounds us.

For the moment, we are aware of our sense of self in the presence and in spontaneous moments. The value of life is not in the blurry, mindless, cycles of repetition; the value of life starts from awareness of the soul in the moment. When you are truly aware of your feelings in the moment, with appreciation, you are truly alive.

HJC

INNOVATION & TECHNOLOGY

HJC helmets are tested in laboratory as well as in “real-life” to meet the highest quality standards. HJC is one of very few helmet companies equipped with its own state of the art wind tunnel laboratory to test aerodynamics, ventilation, noise and more.

From technical development of motorcycle race technology to high-end road cycle helmets, the HJC wind tunnel test lab measures all the relevant forces in a variety of riding conditions to improve the performance of HJC helmets.

HJC

ADVANCED AIR CHANNEL SYSTEM

COOLPATH™ is a new technology patented by HJC. Replacing the inner padding it allows the cool air to flow around your head and improves your comfort during the ride. The cool air flow and the lightness of the helmet enhance the fitting and provide an excellent riding experience.

INNOVATION FOR FITTING & COMFORT

Fitting and comfort are an integral part of HJC helmets. The R&D department has developed 2 revolutionary features patented by HJC for enhanced riding comfort.

Introducing **COOLPATH™** for advanced air cooling, and **SELFIT™** for automatic fitting with self-adjustment.

APPLICABLE
MODELS

IBEX20
FURION20

HJC

SELF-ADJUSTING SYSTEM

SELFIT™ is an automatic self-adjusting fitting system which is a revolutionary technology in bicycle helmet fitting. Once the helmet fit is set for your head it doesn't require further adjustment, even when your head is moving during the ride. The SELFIT™ system automatically adjusts the gap and provides consistent fitting and comfort for your head.

Just put it on and enjoy the ride....

JUST PUT IT ON

5 STEP SNAP FIT

5 snap fitting positions provide consistent fitting and comfort for all different types of head shapes and sizes. The rider can adjust the fitting with precision, resulting in a helmet that will ideally adjusted for a perfect ride, time after time.

HJC

OPTIMAL AERO DYNAMICS

ADVANCED VENTILATION SYSTEM

In order to achieve maximum ventilation, a technical adaptation of Bernoulli's principle is applied to HJC's aerodynamically enhanced models. In motion, the rate of surface flow generally increases as it progresses towards the rear of the helmet.

Through pressure differences, cool air from the frontal intake is extracted through the rear vent for internal heat dissipation, giving the cyclist optimum ventilation while riding.

VENTILATION TEST

Pitch Motion at Yaw = 0 deg.

AERODYNAMIC DESIGN

Coming from MotoGP race-helmet design experience, HJC designers and engineers have become experts in aerodynamics and wind ventilated helmets. Aero helmets, as the word implies, are more aerodynamic than the conventional racing bike helmet, but with compromised ventilation performance.

With HJC helmets, this compromise is very much reduced. HJC probably offers the best ventilated semi-aero helmet on the market.

AG2R CITROËN TEAM

For 50 years, HJC has been working closely with the world's best athletes. We are proud to equip the **AG2R CITROËN TEAM** from 2021 and to be an integral part of this ambitious project by joining a solid and historic structure, guided by values that we share and that drive us on a daily basis.

HJC

HJC draws its strength from competition and working closely with the world's best athletes to push the boundaries of technology. It is in this spirit of ongoing improvement that HJC is working alongside Team **ISRAEL START-UP NATION** to help ensure the safety of riders by providing innovative and safe helmets, while continuing its research with valuable feedback from these riders.

ROAD HELMETS

HJC

IBEX 2.0

Road helmet

249,00 €
MSRP

- FEATHER LIGHT 200g (±10)
- SELFIT™ ADJUSTMENT SYSTEM
- 5 STEP SNAP FIT
- COOLPATH™ INTERIOR
- ADVANCED AIR CHANNEL 2.0
- WIND TUNNEL TESTED
- AERODYNAMIC DESIGN
- VENTURY DYNAMICS
- IN-MOLD CONSTRUCTION
- INTERNAL REINFORCEMENT
- ADJUSTABLE WIDE DIVIDER

The **IBEX 2.0** is an ultra-lightweight and comfortable helmet designed to provide optimal ventilation. Its particular shape improves aerodynamics and allows it to evacuate heat more quickly.

Developed in HJC's own wind tunnel laboratory and in collaboration with world class riders, the IBEX 2.0 integrates Venturi Dynamics to balance the air resistance force. Thanks to its impressive and well balanced design, the helmet is perfectly suited for intense effort and hot weather conditions.

- 5 STEP SNAP FIT
- COOLPATH™ INTERIOR
- ADVANCED AIR CHANNEL 2.0
- WIND TUNNEL TESTED
- AERODYNAMIC DESIGN
- VENTURY DYNAMICS
- IN-MOLD CONSTRUCTION
- INTERNAL REINFORCEMENT
- ADJUSTABLE WIDE DIVIDER

Developed in collaboration with world class riders, the **FURION 2.0** is considered an uncompromising design masterpiece as it combines remarkable aerodynamics and efficient ventilation.

Thanks to HJC's experience in MotoGP racing helmet conception, the FURION 2.0's aerodynamic, innovative and simple design increases its performance and airflow for optimal air penetration and improved air cooling capabilities.

ADWATT

Time Trial Helmet

299,00 €
MSRP

The **ADWATT** was designed through enhanced wind tunnel testing to improve its drag force performance on the track. With the help of Victor Campenaerts, the UCI Hour record Holder, HJC successfully took up the challenge of developing an aero helmet which is efficient both with and without a visor. The result is a helmet design that is fast and extra ventilated at the same time.

GLEO is a helmet for children that focuses on safety and convenience based on the vast database accumulated from the development of our road and urban bicycle helmets. The customizable hole at the top of the helmet allows users to attach various accessories which children like. The cushioned inner padding provides a comfortable fit and the magnetic buckle enables the user to take the helmet on and off very quickly and easily. The **GLEO** helmet may look adorable on its own but looks even better when it is worn by children.

TECHNICAL FEATURES

Feather Light

HJC bicycle helmets are designed and engineered through precise measures to have the lightest weight possible. Density, placement, shapes and materials all play a part in weight optimization.

Wind Tunnel Tested

HJC helmets are tested in the laboratory as well as in “real-life” to meet the highest quality standards. HJC is one of the very few helmet companies equipped with its own state-of-the-art wind tunnel laboratory to test aerodynamics, ventilation, noise and more. The HJC wind tunnel test lab measures the air forces in a variety of riding conditions to improve helmet performance.

Venturi Dynamics

In order to achieve maximum ventilation, a technical adaptation of Bernoulli’s principle is applied to HJC’s aerodynamically enhanced models. In motion, the rate of surface flow generally increases as it progresses towards the rear of the helmet. Through pressure differences, cool air from the frontal intake is extracted through the rear vent for internal heat dissipation, giving the cyclist optimum ventilation and perfect air flow while riding.

Aerodynamic Design

Coming from MotoGP race-helmet design experience, HJC designers and engineers have become experts in aerodynamics and wind ventilated helmets. Aero helmets, as the word implies, are more aerodynamic than the conventional racing bike helmet, but with compromised ventilation performance. With HJC Helmets, this compromise is very much reduced. HJC offers probably the best ventilated semi-aero helmet on the market.... Save Watts with HJC Helmets!

X-static

X-STATIC® is made by permanently bonding 99.9% metallic silver to the surface of a fiber. It is not a nanotechnology, or a complex chemical formula; X-Static is simply silver. The permanent performance of X-STATIC® keeps apparel smelling fresher for longer, even after multiple wear cycles between washings.

Internal Reinforcement Structure

The helmets are reinforced with an internal frame integrated into the EPS. The skeletal frame not only holds the helmet in one piece, but also makes it stronger and more resistant to protect your head in the event of a collision.

Advanced Air Channel System

A certain amount of air passes through the front air-intake port, then circulates inside the helmet and finally exits through the exhaust port. The internal airflow is then increased to cool the head and evacuate the heat.

In-Mold Construction

In-mold is a method consisting in bonding the EPS together with the outer polycarbonate shell for greater structural strength. This improves the rider’s protection by providing a compact reinforcement and gives the product a perfect finish.

Visor

Aero Time Trial Helmets are equipped with a mirror visor to improve the riders’ comfort and visibility, HJC’s aero helmets are engineered in order to have the same aerodynamic performances with and without a visor.

SELFIT™ is an automatic self-adjusting fitting system which is a revolutionary technology in bicycle helmet fitting. Once the helmet fit is set for your head it doesn’t require further adjustment, even when your head is moving during the ride. The SELFIT system automatically adjusts the gap and provides consistent fitting and comfort for your head.

COOLPATH™

COOLPATH™ is a new technology replacing the inner padding, allowing the cool air to flow around your head and improving your comfort during the ride. The cool air flow and the lightness of the helmet enhance the fitting and provide an excellent riding experience.
